

Initial D Manual

To install Initial D Mountain Vengeance just place the Initial D Mountain Vengeance CD in the CD-ROM. The Installation should start automatically. If the install does not start click on the **Start** Button and select **Run** from the Start Menu. In the Open line in type in D:\setup.exe (where D is your CD-ROM drive) and click on the **OK** button. Follow the on screen prompts.

DirectX® 8.1

During installation, you will be prompted to install DirectX®8.1. Initial D Mountain Vengeance requires DirectX 8.1 or higher. If you do not already have DirectX 8.1 or higher installed, follow the on screen prompts to complete the DirectX installation.

We strongly recommend that you obtain the latest DirectX 8.1 compatible drivers for your video and sound cards. Using drivers designed for an older version of DirectX can have unpredictable results. Updated drivers are typically available at no charge through your hardware manufacturer's website.

For additional information on DirectX 8.1, please visit <http://www.microsoft.com/directx/>

To remove Initial D Mountain Vengeance click on **Add/Remove Programs** from the **Control Panel** and click on **Initial D** then click on the **Remove** Button. The game will now be uninstalled.

To run Initial D Mountain Vengeance double click on the Icon placed on the **Desktop** called **Initial D** or click on **Start** then **Program**, **Initial D** and then click on the **Initial D** icon. To get into a race, select Race or Quick race from the main menu.

Main Menu

Race: Click here to start a racing career. Enter a player name. Type in or click on the letters to spell the name associated with career. After completing it, click on the Next Button. You will then need to pick a Race Team and a character from that team to play as.

After selecting a team and character click on the Next Button to go to the Track screen. If this is a new profile you will only be able to run the S1 part of the track. You can choose to either practice by doing a *Time Run* or selecting *Challenge* to race against an opponent.

The final screen before a race is the Race Options. Here you can select an Automatic or Manual transmission, Automatic or Manual Drift and the track conditions meaning the can race Up Hill, Down Hill with a Wet road, or do a Duct tape death match. Some of these options can only be unlocked by winning races. As you continue winning races you will other options and features.

Quick Race: When selected the computer will randomly choose a car for you, a car to race against, which track and how much of the track. These races will not affect a career game buy either rewarding to or removing points from a profile.

Game Options: Here the player can select the Sound and Display options, Controller settings and view game Credits.

Troubleshooting

Ensure that your computer meets the minimum system requirements printed on the bottom of the box.

Initial D Mountain Vengeance requires a DirectX 8.1 compatible 3D accelerator with a minimum of 16MB RAM. DirectX 8.1 is included on the Initial D Mountain Vengeance CD, but you may need to obtain the latest DirectX 8.1 compliant drivers from your hardware manufacturer's website. A significant number of support requests are resolved simply by updating video and sound card drivers.

You can balance the graphics quality of the game with the overall game performance in the Options menu. Lower resolutions and lower detail levels will run faster, higher resolutions and higher detail levels will look better.

For optimal performance we recommend that you close any other applications that are running on your computer prior to playing Initial D Mountain Vengeance .
